HD DIGITAL
SIGNAGE

TRIPLESIGN DIGITAL SIGNAGE

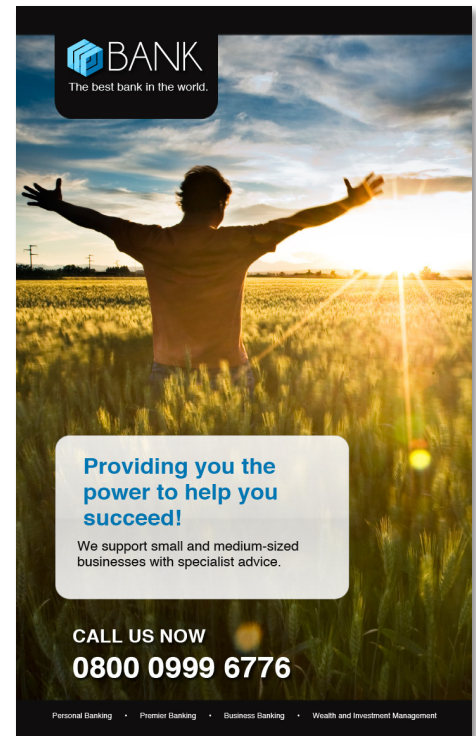

BRING YOUR SCREENS TO LIFE!

In a multimedia world it is essential to communicate in an innovative manner. By using a Digital Signage solution, allowing you to combine videos with imagery, text, music and live television, you can create a thoroughly modern, sleek and cost effective communication platform.

TripleSign from Tripleplay is an end to end thin client server solution for providing digital signage content to single or multiple screens. A truly flexible and simple to use package, TripleSign finds itself at home in any environment, be it a restaurant, university, shop floor or reception area.

Utilising industry standard, IP set-top boxes, TripleSign will work with any screen or display, and with no moving parts it creates a more reliable and robust solution, consuming little power.

A central server is used to manage and distribute the content and playlists to end devices which are zoned to allow different messages to be communicated separately to individual or grouped screen locations. Content can be displayed in a wide range of layouts using either standard or user defined templates.

TripleSign allows individual screen layouts and entire playlist to run at scheduled times, providing the ability to target multiple messages at time specified moments during a day.

These features together make TripleSign a great solution for any multi-use venue and for any organisation with a departmentalised or geographically dispersed structure.

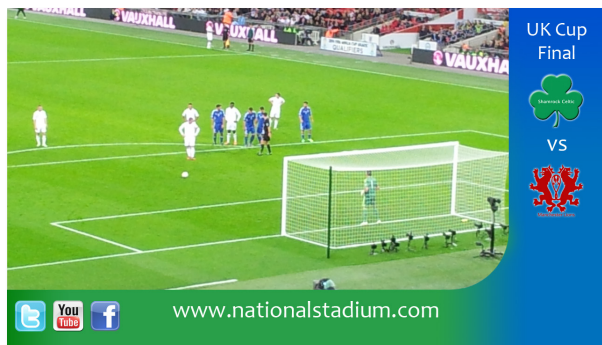

TripleSign also comes with a series of pre-loaded specialist objects and features. This includes objects such as live weather forecasts, digital and analogue clocks, stock market data, meeting room calendars and diaries and live RSS feeds.

“TRIPLEPLAY’S DIGITAL SIGNAGE SOLUTION HAS ENABLED THE COLLEGE TO MARKET TO ITS STUDENTS, STAFF AND VISITORS QUICKLY AND EFFECTIVELY.”

JOY SAINI, SYSTEMS DEVELOPMENT MANAGER,
NEW COLLEGE DURHAM

TripleSign supports a comprehensive list of content types including text, images, PowerPoint, RSS, HTML, video streaming and live television. Access to the system is provided through an easy to use web interface with user group management to provide control over which content, layouts, and display groups are accessible to specific users.

A simple to use, effective and reliable solution, TripleSign from Tripleplay will have your screens doing your talking in no time.
